# SUMMARY

**Ramco Industries Limited**, leaders in the building materials industry for nearly four decades are now introducing a unique building board- Hilux Board. Manufactured with technical know-how from A & A Material Corporation of Japan using state of the art technology.

**Hilux** is a calcium silicate Board made from silicate and calcareous materials reinforced with fibers. The sheets are made in a laminar process and then autoclaved to give a stable crystalline structure. the board is 100 % asbestos free. Hilux Calcium Silicate Board is a top-notch, contemporary building material manufactured in Ramco's two state-of-art plants in the country using the revolutionary HSPC technology, ensuring quality, durability and consistency.

They are lightweight and non-combustible boards with high performance, durability and architectural flexibility, providing customers with exceptional value for money. That's why Hilux is a preferred material among the discerning architect and interior fraternity and with a wide spectrum of end-users as well. They lend themselves to all kinds of finishing and can be decorated with most type of paints, wall papers, ceramic tiles and hard laminate.

**Dry Wall Solution** : Ideal for commercial, Industrial or residential usage, the Hilux Dry Walls are a boon to architects, offering the best in protection, safety, robustness and versatility. These are easy to install and require virtually no maintenance, thus offering the tremendous twin benefits of time and Cost Savings.

**Ceiling Solutions** : A Ceiling today is not merely a roof above the head – it functions a statement of material and aesthetic preferences, and encompasses thermal, acoustic, lighting and maintenance facets of the space it covers. Hilux offers various kinds of ceilings to span varying needs.
